

CHO-SORB® EMI Ferrites

CHO-SORB EMI Ferrites

Cost effective CHO-SORB EMI ferrites reduce conducted emissions and ESD susceptibility on signal lines and power cables without affecting data transmission. They are widely used in computers, printers, key-boards, PBXs, CATVs, radio and television receivers, medical electronics, and data communications equipment. Unlike cable shields, CHO-SORB attenuators do not require grounding.

Easily installed CHO-SORB attenuators are made of specially formulated soft ferrite material containing various metallic oxides, primarily iron oxide. They possess two principle characteristics useful for controlling emissions: high magnetic permeability, which concentrates magnetic fields, and high electrical resistivity, which limits the flow of electrical current in the field.

CHO-SORB nickel zinc material is recommended for unwanted signals between 30 and 300 MHz and high frequency broadband transformers.

CHO-SORB ferrite attenuators are designed to absorb extraneous and unwanted energy on cable and circuit traces. Low frequency and DC see only the conductor and are unimpeded. High frequency energy couples with the CHO-SORB attenuator, cre-

ating an impedance with inductive and resistive qualities.

When a conductor is surrounded by a ferrite attenuator, low frequency signals are transmitted without any loss. High frequency signals encounter inductive resistance due to the ferrite material's permeability. This resistance reduces the conducted current and introduces an insertion loss. At still higher frequencies, the permeability of the ferrite material decreases and the inductive resistance falls. Here,

the resistive characteristics dominate and the resistive quality of the ferrite assumes control of providing the insertion loss for dissipating EMI.

Ordering Procedure

Standard CHO-SORB cable, surface mount and bead-on-lead ferrites are featured on the following pages. All configurations, including attachment clamps, are available through authorized Chomerics distributors for quick, off-the-shelf delivery.

Table 1

TYPICAL PROPERTIES – CHO-SORB EMI FERRITES		
Property	Units	83-10-XXXX-1000
Material	—	Nickel Zinc
Initial Permeability @ B <10 Gauss, μ_1	—	850
Flux Density @ (B) @ 10 Oersteds	Gauss	2750
Residual Flux Density	Gauss	1200
Loss Factor ($\tan\delta$)	—	120×10^{-6} @ 1 MHz
Curie Temperature	°C	>130
Volume Resistivity	ohm-cm	10^5
Temperature Coefficient of μ_1 (20-70°C)	%/°C	1.0
Recommended Frequency Range	MHz	30-200

A CHO-SORB Attenuator Evaluation Kit is also available.
